

# BIORECOVER

Raw Materials. Sustainable. Safe

BIORECOVER's main objective is based on the research and development of a new sustainable and safe process, essentially based on biotechnology, for selective extraction of a wide range of Critical Raw Materials (CRMs).

## IMPACTS

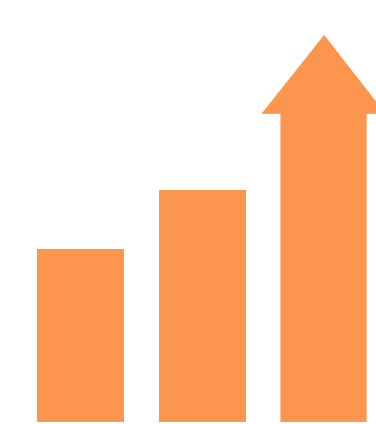

Increase process selectivity, broader range & higher recovery rates of valuable raw materials

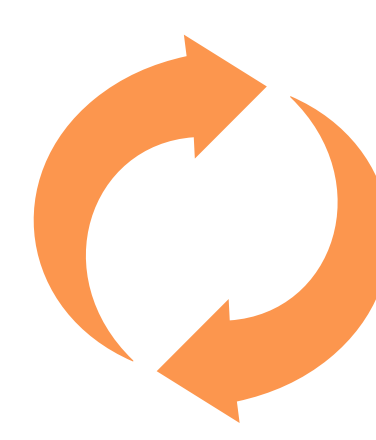

Improve the competitiveness

Generate know-how through patents & publications.

Increase economic performance

Improve health, safety & environmental performance of operations

To achieve the main goal of the project, BIORECOVER will cover the following steps:

- A separate research on the different available technologies
- Selection and integration of the best technologies
- Study of the downstream processes
- Valorisation of the by-products and wastes generated
